

Raghav Verma

New Delhi, India | raghav.verma.work@gmail.com | GitHub | raghav-verma.com | LinkedIn

Summary

Full-Stack Engineer specializing in real-time data visualization and computer vision powered analytics. Experienced building high-performance React systems integrating structured ML outputs for interactive video analysis workflows.

Technical Skills

Languages	TypeScript, JavaScript (ES6+), Python, Rust, SQL
Frontend	React 18, Next.js 14, Vite, Tailwind CSS, shadcn/ui, HTML5, CSS3
Visualization	Three.js, React Three Fiber, WebGL, Canvas API
AI / ML & CV	YOLOv8, geometric feature extraction, signal smoothing, time-series inference pipelines
Backend	Node.js, REST APIs, PostgreSQL, Prisma ORM
CLI & Systems	Rust (Tokio, Cargo workspaces), Python CLI (Typer, argparse), shell scripting
Tools	Git, Docker, Postman, Jest, Vitest

Professional Experience

SDE Intern — **Khel.AI** Feb 2026 – Present

- Built real-time video analysis interfaces integrating pose keypoint outputs into React dashboards.
- Developed frame-accurate video tooling with synchronized overlays using Canvas API.
- Implemented geometric computations for joint angles and motion alignment in-browser.
- Optimized rendering performance for dense frame-level data across high-frequency video inputs.
- Designed reusable visualization components for high-frequency motion data.
- Implemented modular component architecture supporting synchronized multi-video comparison workflows.
- Engineered efficient state synchronization logic for consistent frame-level metric updates.
- Structured visualization pipelines for time-series motion analytics.

Frontend Engineer (Contract) — **Hypeliv Solutions Pvt. Ltd** Aug 2025 – Jan 2026

- Improved Next.js performance reducing LCP from 2.5s to 1.5s via code splitting and lazy loading.
- Built real-time trading interfaces integrating WebSocket market streams.
- Defined type-safe API contracts with backend teams.
- Improved reliability of UI data handling through schema validation.

Frontend Engineer Intern — **The TechnoLabs** Jan 2024 – Jul 2024

- Built React invoice system with validation and PDF export.
- Integrated REST APIs for full invoice lifecycle.
- Automated OCR dataset validation using Python scripts.
- Improved data consistency checks using structured validation logic.

Open Source Projects

RepoGremlin — **Developer Workflow Agent (Under Development)** GitHub

- Repo-aware CLI agent for codebase analysis, implementation planning, code review, and handoff notes.
- Built in Rust as a modular Cargo workspace with 10+ internal crates (runtime, tools, API, session management).
- Implements permission-aware tool execution with session persistence across analytical runs.
- Supports local LLM inference via Ollama in addition to cloud providers.

Meridian — **API Resilience SDK** npm | GitHub

- TypeScript SDK providing retry, fallback, and circuit breaker logic for external APIs.
- Supports OpenAI, Anthropic, Stripe, GitHub with unified response typing.
- Reduces integration complexity via consistent error handling patterns.
- Designed for ESM/CommonJS compatibility with zero runtime dependencies.

Education

Master of Computer Applications 2024 – 2026

Vivekananda Institute of Professional Studies, GGSIPU

Bachelor of Computer Applications 2021 – 2024

Bennett University
